TOTAL dPMR™ MODE 3 TRUNKING SOLUTION

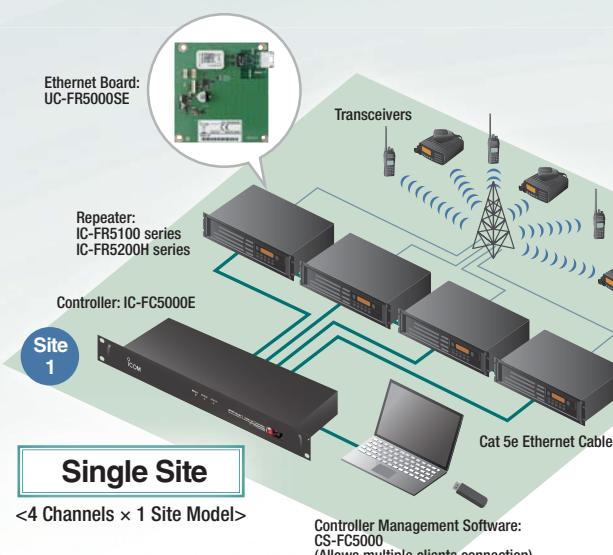

dPMR™ Mode 3

dPMR is a 6.25 kHz FDMA based digital radio protocol described in the ETSI technical standards TS 102 658.

It offers 6.25kHz spectrum efficiency, higher security and greater audio clarity even on the fringes of the communication range.

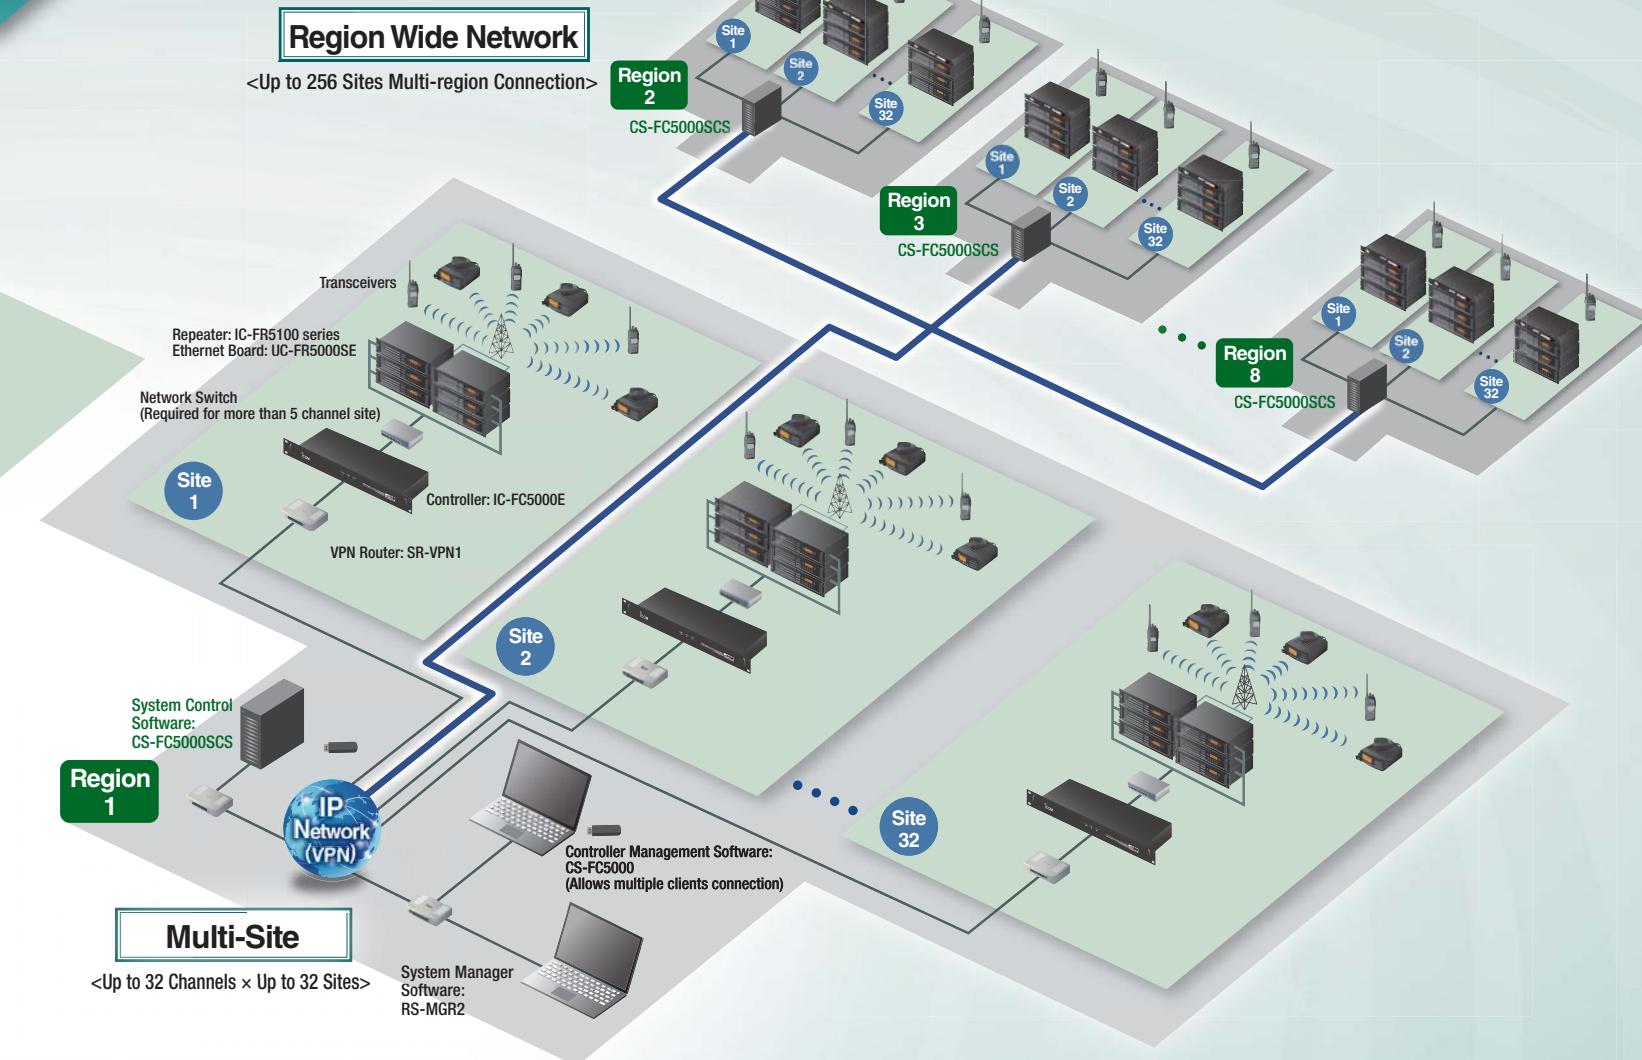

In a dPMR Mode 3 digital trunking system, when a user requests a call through a dedicated control channel, the trunking controller automatically allocates one of the traffic channels and sets up the call, to accommodate a large number of users on a limited number of repeater channels.

The CS-FC5000SCS System Control Software can interconnect multiple trunking controllers over an IP network, so the system can be expanded from a single site system to multiple sites or region wide network to increase coverage.

Single Site

<4 Channels × 1 Site Model>

Region Wide Network

<Up to 256 Sites Multi-region Connection>

System Features

- Up to 32 Channels per Site
One Control Channel, Up to 31 Traffic Channels
- Up to 32 Sites Multi-site Trunking
with CS-FC5000SCS System Control Software
- Up to 256 Sites Multi-region Connection
(8 Region × 32 Sites for example)
- Dedicated Control Channel
- Efficient Spectrum Usage
- Channel License System
- Automatic Roaming from Site to Site
- Subscriber Registration

dPMR™ Mode 3 External Controller
IC-FC5000E

Centralized Control Channel Trunking

The IC-FC5000E dPMR Mode 3 trunking system uses a centralized control channel system. The control channel is independent of the traffic channels and continuously transmits a control signal. The system allocates a traffic channel for the whole duration of a call and can provide quick response during a series of calls. The dPMR Mode 3 trunking system is suited to controlling a large number of users in systems with congested traffic channels.

Up to 32 Channels in a Site

The IC-FC5000E controls up to 32 channels of connected repeaters over an IP network. (One control channel and up to 31 traffic channels.) The IC-FC5000E can be configured with the CS-FC5000 Controller Management Software via a web browser through an IP network.

Up to 32 Sites Multi-site Trunking

When used with the CS-FC5000SCS, System Control Software, up to 32 trunking controllers can be connected over an IP network for linking multiple sites. A radio can communicate with other radios registered to the interlinked trunked sites for multi-site roaming and calling service.

Up to 256 Sites Multi-region Connection

A region is comprised of up to 32 repeater sites controlled under the CS-FC5000SCS. The CS-FC5000SCS can be interconnected and provides multi-region connection for region wide network virtually across the country.

Call Queuing and Pre-emptive Emergency

If all traffic channels are busy, the user's call request is automatically stored in the call queuing until a traffic channel is available. The emergency call can give priority level to a normal call in the call queuing, and the emergency call can force another normal priority call to be cleared down.

Channel License System

A four channel license activation key is supplied with the IC-FC5000E controller for a single site system. When increasing repeater channels or deploying multi-site or multi-region system, additional channel license activation keys are required for each repeater channel.

CS-FC5000 Controller Management Software

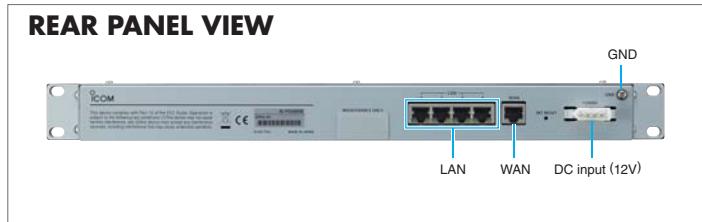

- Configures the system settings including repeater channels, fleet settings and various system options
- Firmware update and remote reboot over an IP network
- Web based software allows connecting of multiple clients (up to 20 accounts)
- Supports localized language for system labels
- Save and load the system setting file for the system backup
- Exports SCF (System Configuration File) for programming terminal radios

Other Features

- Optional RS-MGR2 System Manager software maintains the traffic and system logs to assist in system administration
- A traffic channel can be configured as a secondary control channel
- Telephone interconnect (Planned)

SPECIFICATIONS

Operating temperature range	0°C to +40°C
Power supply voltage	12 V DC
Current drain (approximate)	600 mA
Dimensions (W×H×D)	483 × 44 × 219 mm (1U height)
Weight	2.25 kg
LAN	RJ-45 connector × 4 (100BASE-TX)
WAN	RJ-45 connector × 1 (100BASE-TX)
LED	Power, Error, Status
Conformity Standards	ETSI TS 102 658

REAR PANEL VIEW**COMPATIBLE MODELS**

	VHF (136–174 MHz)	UHF (400–470 MHz)
Transceivers	IC-F3400DPT/DPS/DP IC-F3262DT/DS IC-F3162DT/DS	IC-F4400DPT/DPS/DP IC-F4262DT/DS IC-F4162DT/DS
dPMR Mode 3 compatible transceivers (versions) are required.		
Repeaters	IC-FR5100/FR5100H IC-FR5000 IC-FR5200H	IC-FR6100/FR6100H IC-FR6000 IC-FR6200H
dPMR digital repeaters (versions) are required.		
Ethernet Board	UC-FR5000SE is required for each repeater. * UC-FR5000SE is already installed to IC-FR5200H or IC-FR6200H.	
VPN Router	SR-VPN1 is the best match VPN router for the IC-FC5000E trunking system.	
SYSTEM MANAGER	The RS-MGR2 monitors the hardware status and network connectivity/statistics and collects the communication and traffic logs.
